Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Objections***

Claims 11-15 are objected to because the claims are method claims but fail to claim any method steps. Therefore, the claims need to be amended by either adding method steps or canceling the claims from prosecution.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-5, 11-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen (USPN 5,242,424).

Chen discloses a venting system for an infusion drip chamber, comprising an automatic air eliminator (221), a mechanical eliminator (25), a conduit, a plunger, biasing device, and at least one vent opening (Figures 1-7 and entire reference).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3763

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen as applied to the claims above, and further in view of McPhee (USPN 3,776,229).

Chen discloses the claimed invention but fails to include the automatic eliminator with hydrophobic element, a cap and a receptacle chamber.

McPhee discloses a drip chamber with an automatic eliminator with hydrophobic element, a cap and a receptacle chamber (Figures 3, 7, 8 and entire reference).

At the time of the invention it would have been obvious for one of ordinary skill in the art to combine the apparatus of Chen with McPhee because it McPhee teaches beneficial hydrophobic filter with a valve structure so that air can escape from the top of the chamber and will not interfere with the fluid flow (McPhee-Column 1, lines 35-50).
